

## Android tablets - manual updates

### Turn off automatic app updates

Start by opening the Play Store app. Next, tap the slide-out menu button in the upper left corner, as denoted by three horizontal lines, then tap Settings. On the settings screen, tap Auto-update apps.

On the next screen, you'll be able to choose whether you want to allow apps to automatically receive updates over WiFi, whether you want to allow apps to update at any time, or whether you want to manually install all updates. For the sake of this how-to, we want to turn off auto-updates altogether, so go ahead and tap "Do not auto-update apps."

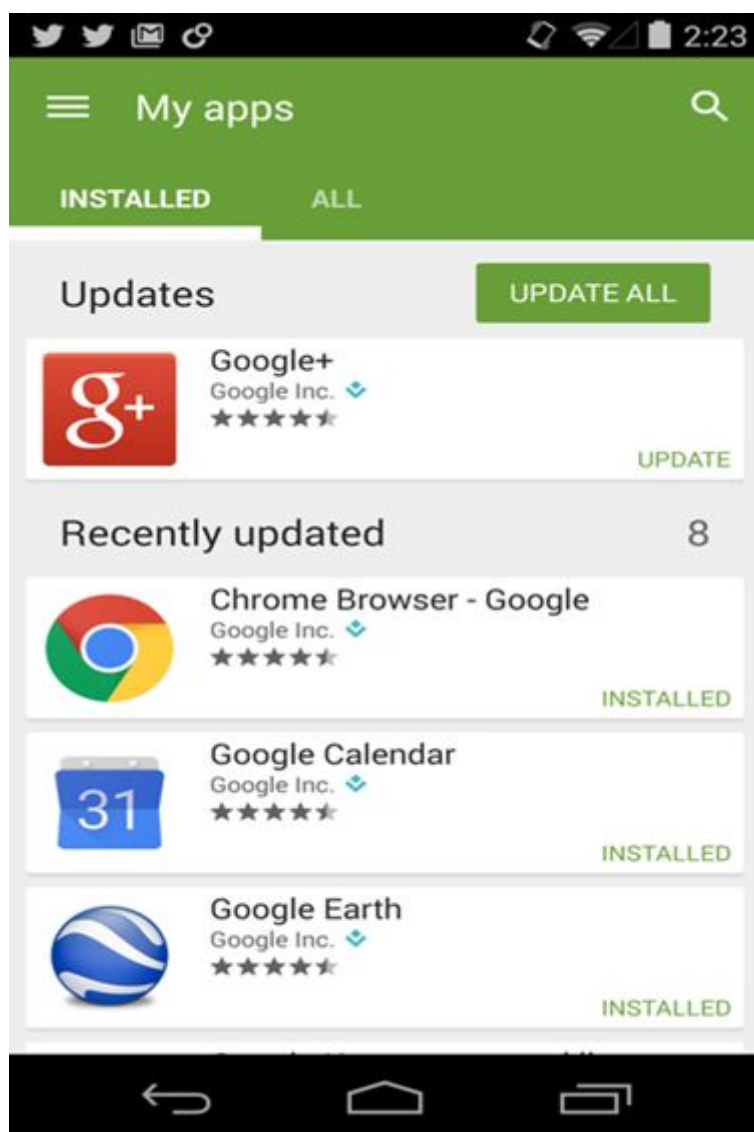

Don't update those apps!

At this point, the Auto-update apps option picker screen will close, taking you back to the main Google Play Settings screen. Tap your Android device's back button to return to the Play Store's home screen (it may be a hardware or onscreen button, depending on your device).

## Manually download app updates

To install any app updates, go back to the slide-out menu in the Play Store app, then select My apps from the list. Go to the Installed screen if you aren't there already, and look for the Updates subheading, which appears when you have apps with available updates.

The "My apps" screen lets you manually update apps on an individual basis.

If you want to install updates for all apps, go ahead and tap the green Update all button. If you want to install updates one by one, tap on the app's name under Updates, then tap the

Update button on the next screen that appears. Repeat this process for all the apps you want to update.
