

Installing Securly SSL Certificate on Android

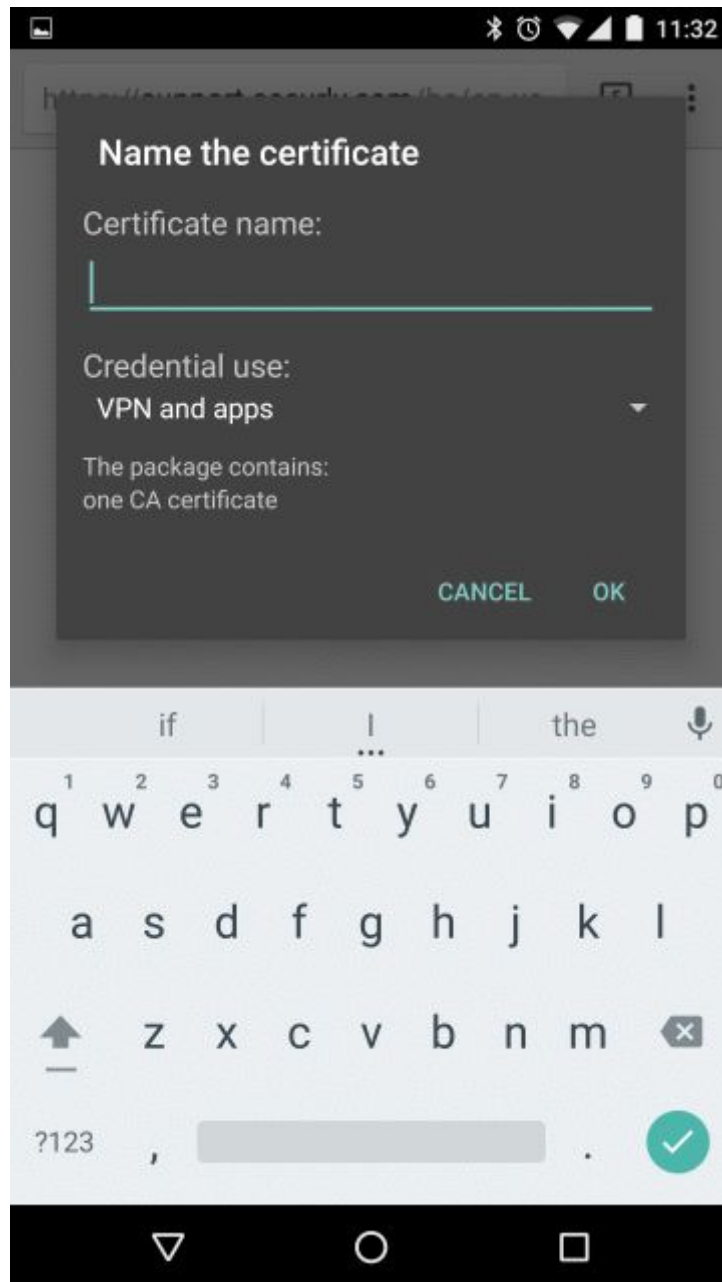

If you use Securly and need to install the Securly SSL Certificate on Android devices, follow the steps below.

1. Your Android device will need to have a PIN set otherwise by default you can not install any certificates to the device. This is found under **Settings->Security->Screen Lock**

2. Click on the **Securly SSL** certificate file that you want to install below

3. At the **Name the certificate** screen give the certificate name and press the **OK** button.

4. You can verify that the certificate is installed by going to **Settings->Security->Trusted Credentials->User**
